🇮🇳 Indian

👤 PROFESSIONAL SUMMARY

Performance-driven AI Engineer with hands-on industry experience building Agentic AI systems and Retrieval-Augmented Generation (RAG) pipelines. Specialized in developing production-ready LLM workflows and scalable AI microservices. Proven track record of transforming complex PoCs into enterprise-grade solutions using Python, Langflow, and Docker.

👜 PROFESSIONAL EXPERIENCE

Junior AI Engineer, Evalueserve 08/2025 – Present

- Architected end-to-end AI workflows using Langflow and Python ,streamlining the automation of internal business processes and increasing operational efficiency .
- Designed robust prompt engineering strategies and LLM evaluation pipelines, improving model response accuracy and significantly reducing hallucination rates .
- Orchestrated Docker-based deployments of AI microservices, ensuring consistent environment parity and reducing deployment time for production updates .

AI Engineer Intern, Evalueserve 02/2025 – 08/2025

- Built internal AI tools and chatbots
- Rapidly prototyped Proof of Concepts (PoCs) using various LLM frameworks, helping the firm secure new client AI projects.
- Got to learn basic Dockers and Kubernetes .

🎓 EDUCATION

B.E. - Computer Science Engineering Hons. With 2021 – 2025

specialization in AIML, Chandigarh University

CGPA: 8.10

Senior Secondary (CBSE), DAV Public School 2020

86%

Secondary (CBSE), DAV Public School 2018

86.2%

🧠 TECHNICAL SKILLS

- Python, SQLCore Tech: Python (Advanced), SQL.
- AI Specialization: Agentic AI, RAG, Prompt Engineering, LLM Evaluation (RAG), Computer Vision.
- Tools & DevOps: Langflow, Flask Docker, Git, MySQL.

PROJECTS

Customizable RAG-based Chatbot,

Customizable chatbot with which you can talk to any personality of your choice

Developed a personality-aware chatbot with which you are able to communicate with any fictional ,movie , book character in realtime

AI-based Image Colorization, Colorized black & white images using CNNs

Image Quality & Colorization: Built Deep Learning models (CNNs) to enhance resolution and colorize legacy black & white imagery with high fidelity.

Facial Emotion Detection, Computer vision-based emotion classification

Implemented a real-time Computer Vision system for emotion classification, achieving high accuracy across diverse lighting conditions.

WhatsApp Chat Analyzer, ML-based chat insights tool

Designed an ML-based sentiment and insight tool to visualize user interaction patterns

ACHIEVEMENTS & CERTIFICATIONS

Winner - Dataset ARC (IEEE)

Rajasthan IT Day Hackathon Participant

Intel AI & Data Analytics Workshop
